## **In the News:**

October 21, 2018

WeatherAll Coating Technologies™ announces company-wide commitment to provide Emergency Installation Services and Performance Coating and Foaming Materials to assist in all phases of the safety and rebuilding of the Florida areas hit by hurricane Michael this month.

Immediate Specialty Application groups have been organized to set up to respond to calls for emergency temporary roofing, waterproofing, building protection and reconstruction for any type of commercial or residential building structures. All types of structures from high rise buildings to single house dwellings will be applicable and prioritized based on extreme need first.

WeatherAll Coatings is planning to also pull together local Panama City and Mexico beach emergency and rebuilding resources providing them with disaster-allocated material quantities for everyone willing to help. Volunteers will also be accepted to join the work teams to help expedite emergency protection solutions. All contractors and volunteers wanting to offer assistance please email or call us as soon as possible, [support@weatherallcoatings.com](mailto:support@weatherallcoatings.com) 888-216-7168.

WeatherALL Coatings Technologies and sister company Scientific Chemical Inc. have brought together external closely tied partnered construction companies which have already jumped on board for the large assistance effort. President, Lee Seligman stated “our companies and a number of our external partnered companies are committed to join forces to immediately assist in providing disaster relief resources with emergency protection materials, technical manpower and any engineered solution required to help protect and reinforce any and all existing and new-to-build structures”. The Director of Engineering and Field Operations, Robert Vance, believes the companies’ endeavor will continue throughout 2019 and into 2020. “Re-organization of our application resources will then evaluated as relief is needed.”
